Size and strength matter ...at all stages of the game.

Even superheroes need help sometimes.[™]

PediPlates[®] by **OrthoPediatrix** is a complete physal tethering instrument system that addresses the unique needs found in childrens' angular deformities.

- Stainless steel plates & screws provide greater strength, resistance to breakage, as well as ease of removal.
- Multiple plate sizes and shapes offer greater options intraoperatively.
- The I-plate more adequately addresses large and heavier patients (adolescent Blount's disease) by providing additional fixation options.

Children are not just small adults[®]
